

AI - assisted hiring

model construct.

AI - allocation and measurement of work.

Cross validation → data evaluate training data. whether

Workplace surveillance and ~~monitor~~ performance monitoring.

facial recognition { what kind of parameters can go in  
to the system to make decisions

Cross validation: compare and select a model.

⇒ easy to understand/implement/  
results in skill estimates → have a lower bias  
than other ~~models~~ methods.

~~k-fold~~  
resampling procedure → K

estimate how the model is expected to perform

we determine whether a given model is optimal by  
looking at ~~its~~ its F1, precision, recall, and  
accuracy.  
or its coefficient of determination ( $R^2$ )  
and error. (for regression)
